

PenRad and Medipattern offer another innovation: Integrated Breast Ultrasound CAD.

Medipattern's B-CAD® is the first interactive CAD developed for Breast Ultrasound Imaging.

Using the same views that you capture today, the sonographer can start CAD with a single click for B-CAD to automatically measure, characterizes the lesion, and standardize descriptive reporting. Improve workflow with incremental revenue from Ultrasound CAD.

The body of scientific papers that support the BI-RADS® lesion classification methodology have shown that diagnostic accuracy improves when more feature descriptors are included. Better decisions are based on more thorough evidence. B-CAD automates BI-RADS making it easy for you to utilize the full extent of the lexicon.

B-CAD improves communication, saves time and improves overall quality of care to increase efficiency, productivity and effectiveness. B-CAD standardizes your enterprise to your specific protocol. Call 763.475.3388 or visit www.PenRad.com to work less and earn more. Available integrated in PenRad or as a stand-alone product.
