# PenRad Three Palms ViewStation Connectivity Module

PenRad's connectivity to the Three Palms Software (TPS) software increases efficiency and accuracy, provides better ergonomics and work flow. This module allows the radiologist to have bi-directional examination selection synchronization from either system's worklist and the TPS information directly imported into PenRad as well.

A tap of the TPS button imports and plots the abnormality information specified in the Three Palms Softcopy workstation directly into PenRad to generate the narrative report.
